

Notes for Water Watchers

Kansas Department of Health and Environment

December, 1993 (Revised October 1997, February 2000)

Gardening Supplies for Protecting Water Quality

A variety of gardening supplies are available that come from natural origins. They decay slowly and contain no hazardous degradation products. These materials, like any synthetic nutrient or pesticide, must be used properly. For example, too much manure could result in groundwater and surface water pollution.

The following Topeka-area vendors sell these types of gardening supplies. This list is not intended to be complete nor a recommendation/endorsement of the Kansas Department of Health and Environment or the State of Kansas.
